What's New 4

What's New

The following information highlights the new and enhanced features introduced in this Netwrix Auditor 10.6 version.

New Features

- **Improved risk assessment, searching and alerting capabilities for sensitive data** — Through integration with Netwrix Data Classification, Netwrix Auditor offers additional enhancements to data security. You can now identify sensitive data shared with everyone and through direct access in Risk Assessment, as well as search for activities around sensitive data on Dell Unity and receive alerts on such activities.
- **Add-on Store inside Netwrix Auditor** — The Add-on Store is your one-stop shop for integrating Netwrix Auditor with your IT ecosystem. Now, you do not need to leave Auditor to get free, pre-built add-ons for SIEM systems, ITSM tools, cloud services, and more.
- **Reporting on Azure AD group membership** — Two new reports empower you to easily review the membership of privileged groups in Azure AD, either on demand or via subscription. One report lists all your Azure AD groups with their type, description and members; the other lists all the groups that a given user account is a member of.

Major Enhancements

- Cisco Meraki devices can now be monitored in the environments where MFA is required thanks to the new API connection mode.
- The Access Reviews module now supports DFS and non-Windows file shares: Dell Unity, NetApp, Nutanix Files, Qumulo, and Synology.
- To speed investigations, details about the actions that triggered an alert are available right from the Alert dashboard.
- The rearrangeable tiles on the Home Screen are now resizable as well.
- You get detailed recommendations on how to use Netwrix Auditor based on your configuration and action history.

- You can filter the “Overexposed data in Teams” report based on data sensitivity.
- You see the names of accounts that were added to or removed from Exchange Online distribution lists.
- Identification of MFA requirement for Azure AD logons is now more accurate.
- Netwrix Auditor now supports Oracle 21c, Pulse Secure 9.1R3, Cisco OS FTD 6.5, Qumulo Core 4 and 5, Dell Unity 5.2, NetApp up to 9.12, Dell Isilon up to 9.4, VMware vCenter up to 8.0.
- Numerous additional enhancements have been made to improve administration, performance and security.

Update: .NET Framework Version Required

.NET Framework 4.8+ is required for Netwrix Auditor v10.6+.

Bug Fix List

See the [Netwrix Auditor v10.6 Bug Fix List](#) PDF for a list of bugs fixed in this version.
