About this Document

This document provides an overview of the changes in the 3.6 version (v3.6.2115) of Netwrix SbPAM.

This document covers:

- New Features & Enhancements
- [Product Updates & Fixes](#)

What's New in this Version?

The new and improved features introduced in Netwrix SbPAM v3.6.2115 include:

CAUTION: As part of the upgrade process, the Netwrix SbPAM installer will complete a mandatory encryption key rotation. Customers who are running Netwrix SbPAM in high-availability mode or use distributed Action Service or Proxy components should refer to the [SbPAM: Upgrading to SbPAM 3.6 - High Availability and Remote Services Configurations](#) knowledge base article before beginning an upgrade.

New Features

- Netwrix SbPAM Setup Wizard — The Netwrix SbPAM Setup Wizard guides users through a few simple steps to configure their first SbPAM session.
- Secret Vault platform — The Secret Vault allows SbPAM administrators to store credentials not associated with a specific Resource in the SbPAM database. These credentials can be viewed by SbPAM administrators and assigned to Credential Release policies so SbPAM users can release them.
- Enablement Toolkit — The Enablement Toolkit is a standalone utility that can be run on any SbPAM server during deployment to ensure the environment is properly configured for SbPAM.
- SIEM Service on Additional Servers — The SIEM Service is installed with SbPAM and can also be installed remotely on other servers. This feature provides the option to track and display SIEM events defined in the console from different locations within an organization.
- Strongpoint Integration (beta) — This integration adds support for the Strongpoint API, which allows for the management of Salesforce Permission Sets and Permission Set groups.
- Activity Token Complexity Policy — This new access policy allows users to manage the complexity of activity tokens created for connection profiles.
- System Settings — The new System Settings Configuration applies a new FQDN URL value to the SbPAM web services and re-registers them.
- Reset User MFA from Users Page — Allows administrators to reset a user's MFA directly from the Sessions tab of the Users page. Resetting the user's MFA will generate a TOTP secret for the user and force them to register an authenticator. This option is only available when the Internal MFA option is enabled on the User Details page.

Enhancements

- Additions to the Users & Groups Group page:
 - Group Roles tab — Shows whether the current group has been assigned an available SbPAM roles: Administrator or Reviewer.
- Additions to the Users & Groups User page:
 - User Roles tab — This tab shows whether the current user has been assigned an available SbPAM roles: administrator or reviewer.
- Enhancements to the Users & Groups Interface:
 - Ability to add or remove access policies — This enhancement allows Administrators to add or remove users to existing Access Policies when viewing a user's Policies tab.
 - Add users to roles — This enhancement allows Administrators to assign roles to users directly from the Users & Groups interface.
- Enhancements to the Activities Interface:
 - New AD attribute variables for Login Account Templates - %firstname%, %lastname%, %displayname%, %fullname%.
 - Substring functionality for Login Account Templates — Allows the user to format login account templates using the first() and substr() functions.
 - Add to Azure AD Group action — Support added for Azure AD Security Groups
 - Change to RDP Disable – The post-session RDP Disable action has been converted to a pre-session and post-session pair of actions.
 - Post-session Run Enforcement — Ensures the Continue on Error setting is always enabled for post-session actions. This ensures all actions in the post-session run even if an error occurs.
- Enhancements to the My Activities page:
 - Single activity auto-open - If there is only a single activity card present on the My Activities page, that activity will open automatically.
 - Activity card grouping - Multiple Activities across different Access Policies now open as a single activity card. Resource or credential selection may be accessed and filtered by selecting the Access Policy drop down in the Configure session interface.
- Changes to System Settings:
 - View Database Settings — Users can view configuration statistics and values of the current database in System Settings.
 - Removal of Administrator Options as a System Setting — Administrator Options can no longer be accessed as a system setting.
- Changes to Task Scheduling Function — The features necessary to add and edit task schedules are now in the same place: under the Schedule Policies platform. Previously, a task schedule could only be edited within the Schedule Tasks service node. This service node is now used to review scheduled tasks, rather than modify them.

Product Updates & Fixes

In addition to the new features, the following list contains a comprehensive update on fixes introduced to Netwrix SbPAM. For more information, contact Netwrix support.

SbPAM v3.6.2115 Fixes

Case #	Description
86685	The sbpam-proxy register ignores hostname mismatch when using CA hash
86686	Application user session not displaying on Active / Historical tab
86692	Cannot delete and re-add Service Account due to duplicate name error
86697	Group membership extraction takes a really long time
86700	Protection Policies running against Resources that aren't in a Protection Policy
86704	IIS website certificate binding disassociates during upgrades
86706	Activities that attempt to add users to built-in AD group "Group Policy Creator Owners" fail
86708	Login Account Template with bad syntax appears to save despite toast error popping up
86724	DirectConnect sessions don't prompt for Notes when required by the Activity's Connection Profile
86739	Action service "is running" logic is not working properly
86756	Remove-SbPAMDirectoryRole failure in Azure AD session
86837	RDP button missing when you create Credential Release session
86842	Website URI not updated when login URL is changed
86855	API request fails filtering on access policies with empty description
86966	Action Service and Action Service Worker logs missing
87007	First time user login not showing User Setup page
87020	"This URL is not a part of your session" on chrome newtab landing page briefly displayed before navigating
87023	Changing Access Policy name is not reflected on the Access Policy list
87038	Deleted default Access Policy was restored by upgrade
87040	Custom lock session message is not displaying for web and AzureAD sessions
87042	Remove CORS requirement from text in SAML auth connector wizard, as it's not required for SAML
87088	Credential based access policy credential table missing columns
87091	Activity Groups Created By field is not updated properly when you create a new group
87100	Resource IP address field cannot be cleared
87103	Validation error during hostscan
87104	Activity Groups Created By field is not updated properly when you create a new group
87149	Clicking arrow to the right of the assigned Connection Profile in an Access Policy brings you to the top of the Connection Profile list instead of the selected profile
87182	Cannot search the Historical Sessions table
87728	Activity cards are not displayed if a user launches the Product Tour from a different page and ends the tour on the My Activities page

Case #	Description
93688	ManagedResourceLocalUserView throws null exception with a fresh install
97131	Credentials being orphaned after associated domain is removed
99275	Integration Connectors - "CheckoutScriptBlock" and "CheckInScriptBlock" are one line long
99514	Credential Search / Get endpoints should allow App roles
99515	Disable step should be skipped if ActivitySession is using a Vault user
99570	When you add a new domain as a resource the Frequency field defaults to NEVER
99668	SbPAM-Proxy mistakenly detects a 16-character user as GUUID.
99716	Remove case sensitivity - Problem with user created Resource Groups and the Add Resources dialog
99913	StealthAUDIT integration connector has infinite loading table
100507	Users are not disabled at end of session in specific circumstances
100943	Restarting the SbPAM-Proxy breaks active SSH session monitoring
101023	Rotate password is not working in one specific domain
102239	Action service delay picking up existing jobs after service restart

About Netwrix

Netwrix is a software company that enables information security and governance professionals to reclaim control over sensitive, regulated and business-critical data, regardless of where it resides. Over 10,000 organizations worldwide rely on Netwrix solutions to secure sensitive data, realize the full business value of enterprise content, pass compliance audits with less effort and expense, and increase the productivity of IT teams and knowledge workers.

Founded in 2006, Netwrix has earned more than 150 industry awards and been named to both the Inc. 5000 and Deloitte Technology Fast 500 lists of the fastest growing companies in the U.S.
